Would like to confirm the map of Hurricane Dorian Trajectory

Question: Wondering if there's any idea as to where the chart the President held up a short while ago in a briefing with McAleenan may have come from? We're particularly trying to determine where the black mark over a part of southern Alabama and northwestern Florida might have come from. We're not seeing this picture with the black semi-circle looking mark on any of the NHC forecasts or NOAA projections for Dorian.

Hope you're well. Was curious, did the NOAA ever produce a map that the president displayed today at the White House, where it appears that Alabama is highlighted in sharpie or marker of some sort as being in the path of Hurricane Dorian?

Hello, my name is Audrey McNamara, I am a reporter at The Daily Beast. I'm reaching out about a map of Hurricane Dorian's trajectory presented by President Trump today that has raised some questions. The map appears to have an additional line including Alabama that is not on NOAA's projections. Is President Trump's map correct? If not, why not?

In a shot of President Trump in the Oval Office, he's holding up a map of Hurricane Dorian's path which seems to include a drawn-on bubble including Alabama in the storm's range. Is Alabama now likely to be hit by the storm? Was the White House instructed to change maps to reflect that change?

My name is Jacob Pramuk and I'm a reporter at CNBC.com. I had a question about the initial forecast map President Trump just held up during a briefing on Hurricane Dorian (a screenshot is attached). The path of the storm is outlined in white, but there's a black circle that extends farther west over Alabama. Was that black circle in the original forecast made by the government?

President Trump held up a map of Dorian's original projected path today in the Oval Office. (I attached a photo.) Is this an official NHC or NOAA projection? It appears like something was added to suggest the hurricane could have affected Alabama.
