Subject: Re: ROC on LTO Near-term actions EA

Good questions, Barb.

I agree with your preference, specifically:

- (a) comment in the EA when I think a characterization is misleading or incomplete, and
- (b) provide my own list and characterization of the science as a separate, stand-alone, doc.

Speaking of new science, after multiple e-mails, I received some documents from Jeff specifically related to the I:E ratio, but not from anyone else, or for any of the other near-term actions that Reclamation is proposing. This is our huge opportunity to change Reclamation's course, or at least consider some of the newer science that they may not be privy to, rather than sit on it and wait until we conduct our effects analyses. So, PLEASE PLEASE PLEASE send over any new science you have on any of the near-term actions...ASAP.

got it. I'll send you what I have tomorrow.

Question: In terms of the science, do you want me to add reports/"correct"/expand on the existing summary in the EA? Or draft a separate document?

My preference would be to (a) comment in the EA when I think a characterization is misleading or incomplete, and (b) provide my own list and characterization of the science as a separate, stand-alone, doc.

Hopefully those of you who have "RSVP'ed" "yes" are actively reviewing and commenting on the EA (thanks, Jeff, for your track changes).

If you have any questions or are confused about anything you read, please let me know by COB today. I may be able to answer, but if not, we have a dedicated core team meeting tomorrow for just that, so I can convey those questions.

Comments on the EA by COB tomorrow, please.
