Subject: Summary from CAMT Delta Salmonid Research Workshop

Attachments: CAMT Salmon Workshop Summary of Input_8-15-18.pdf

All,

Thank you for your participation and/or interest in the **CAMT Delta Salmonid Research Workshop** held at UC Davis back in May.

The workshop involved over 70 individuals representing researchers, managers and policy makers and provided a great opportunity to share information and brainstorm ideas regarding future research to address key management questions regarding salmonids in the Delta.

Attached for your reference and use is a summary of what we heard and recorded at the workshop organized according to the eight management topics that were discussed, including listings of suggested research studies.

The summary also includes appendices that provide a listing of workshop participants, a listing of the workshop questions and detailed notes from each of the discussion groups.

CAMT is currently working on a consolidated framework and vision for future research based on the input received at the workshop, as well as ideas for follow-up workshops. Stay tuned for more information on these in the coming months.

In the meantime, we strongly encourage you to use the information provided in the summary to develop research proposals in response to the upcoming Proposal Solicitation Notice (PSN) being issued by the Delta Science Program and the California Department of Fish and Wildlife that will provide for up to \$12million in research funding for science in the Delta. See <http://www.deltacouncil.ca.gov/sites/default/files/2018/08/Public%20Draft%20Joint%20Science%20PSN.pdf>

We also welcome any feedback, comments or corrections you may have to the summary.

Ultimately, through continued dialog we hope to promote a better understanding of management needs, the current state of knowledge and potential opportunities to expand that knowledge to improve the effectiveness of management actions in the Delta.

Thanks,

Bruce
