Subject: Re: NMFS ROC LTO BiOp Review

Hi Cathy,

Never a dull moment :) I will have to check my notes (can do in about an hour) to see if any of the reviewers were constrained by other obligations in early June. I will let you know what I find out tonight. Do you want me to notify the reviewers of this potential shift in the timing, or should I hold off until you have more information?

Thanks,
Michelle

There is concern that when the draft sections go to peer review, they also get released to other stakeholders (in alignment with an agreement the services made with the water users and NGOs), and Reclamation is not wholly comfortable with some things in the effects analysis being released for public consumption just yet. This is all very new and developing, but I wanted to explore early whether there was even the potential to have the review occur 1 or 2 weeks later.

> I know this is last minute...please don't be angry at the messenger!!! I know that it can also make for "grumpy" reviewers, which is not a good mindset for them to have when embarking upon a review. But it's the potential path right now so I wanted to at least apprise you early so that we can sniff out the possibility. Please let me know what you think of this in terms of feasibility and what we need to address.
