Subject: Re: **Attendee Information*** (Forward to others) WebEx meeting invitation: CalSim Review: Shasta RPA Amendment

The purpose of the meeting is for us to be enlightened about Reclamation's modeling of the purported impacts of the draft proposed Shasta RPA amendment, so I think anything is fair game to ask.

That works fine for me.

I suggested it, in part, because I'm not sure if this review tomorrow is the "right" place to ask my questions?
Here are some of them:

- For comparison, is there a CalSim run of the "base case" but with target storage sufficient to meet temperatures at BSF (not CCR)?
- Average annual "spill" increases by 215 TAF under the amendment.
 - What were deliveries during these years?
 - Would contractors have received reduced allocations? by How much? (i.e. What is the cost of an increase in average annual spill?)
- Average annual "deliveries" decrease by 493 TAF under the amendment.
 - Similar to the spill questions what is the cost of a decrease in average annual delivery?
 - Deliveries are modeled March - Feb, doesn't that cover the entire year? So wouldn't the amount of water remain the same but only the timing be different?
 - Looks like the decrease in deliveries is being driven by SOD Ag, why is this? Are there other, confounding factors?

- Can we walk thorough a specific year?
 - It looks like under the NMFS amendment 1966 would have had the highest flood spill but also SOD Ag would have had deliveries reduced by ~600 TAF. Maybe a simple reason but I don't understand why in this (1966) case?
- Are we talking about temperature?
 - A good question that came up at the workshop was why do some years under the proposed amendment have higher temperature dependent mortality? The response was that this is because of the way the "operator" was coded. Is that code a reasonable expectation for how an operator would perform?

Just some of my questions,
Evan

We can. I'm not sure if your calendars will sync up to have one, but in lieu of that, we can send each other questions and I (or someone else) can compile.

My only/main question at the moment is what the baseline model run is. Seems to me that it should be the RPA, not "current." Derek can help with that once he gets the model runs.

I'll be teleworking but plan to drive over in my POV.

Should we have a pre-meeting to discuss any questions internally?

Thanks,
Evan

Hi Derek,

I start the WebEx a bit early to make sure the connection can be made prior to the start of the meeting, I am sorry for the confusion. The meeting starts at 1:00 pm and we are hoping everyone can meet in person at the JOC, room 302, otherwise the web portal is available.

Hi Randi,

It looks like the start time has changed from 1pm to 11:45am PST. I didn't notice a room number with the last update, so is it going to be strictly a web meeting or are you hosting the meeting physically at the JOC, as well? Sorry if I'm being dense.

Derek
