Subject: Re: Take for American

While things are quite...

Skimmed through OCAP ITS and it's not separated by division beyond the table so if we want to separate the ITS narrative by division please send me a template.

This is a framework/programmatic effect and probably has no bearing on the ITS but just as an FYI, the downramping rate in the Folsom water control manual BO is WAY higher than OCAP (10,000 cfs per 2-hour period compared to 1,000-4,000 cfs per day)

Hi Joe --

Brian is helping Howard with some "solutions" efforts for ROC, and we need to start addressing take for all divisions. You are the next best option for the American! We have identified that Clear Creek, East Side, and American likely all have the same kinds of stressors and take (flow-related, temperature-related) and could have the same format. Look for something from Naseem to get you, Sarah, and Kristin on a call to talk through what this should look like. Let's make as much progress on this as possible while things are quiet this week and next.

Thanks!
Cathy
