**Subject:** Joint and shared science and modeling...  
**Attachments:** sobeck.srscjuly2016.pdf

Barry, Maria – to follow the excellent conversation earlier this week in the Sacramento Valley, there seemed to be general discussion and agreement that we can all work better together on joint science and modeling efforts on the Sacramento River. Let me propose that we try to schedule a follow-up meeting when Barry is in Sacramento to discuss this in more detail and to flesh out the workplan going forward. Barry, can your office propose some date(s) and time that also work for your team? I am also copying David Mooney to help coordinate with Reclamation. Thad and Lewis can work with Maria, Garwin and David to develop an agenda for the discussion to make the time productive and help prioritize our respective efforts over the next several years.

For reference, I am attaching the letter from our discussion several years ago, where we all committed to this joint and shared science and modeling. It sounds like there is a continuing was desire by all to pursue this more vigorously... we look forward to the ongoing discussion. Thank you.
